INVESTOR & CORPORATE PRESENTATION (PITCH DECK v4.4)

TRUSTIA AI TECHNOLOGIES

Deterministic Level-4 Universal Robotaxi & Autonomous Driving Software Core

1,350 Automated Tests (100% Green)

- 1,329 Core + 21 Robotaxi SDK tests with zero-tolerance verification.
- CenterPoint BEV 3D Deep Perception (ONNX Runtime / TensorRT) · 25.4 ms.
- GNSS-denied (GPS-free) 400Hz ESKF & 3D LiDAR NDT SLAM.

Universal Multi-Chassis Architecture

- Code invariance: Same core powers Robotaxis, Port AGVs, and Defense UGVs.
- Native CAN-FD integration for SAIC Maxus MIFA 7 & Hyundai Ioniq 5.
- Hardware-locked (HMAC-SHA256) Closed-Box Enterprise SDK.

Official Corporate Accreditations

- ASELSAN Approved Supplier (#0050569, SAP: FZQHEXGFMTJU) & STM Candidate.
- European Commission Participant Identification Code (EU PIC: 861711529).
- EIT Urban Mobility Partner (CUS15554) | OIN Global Patent Defense Pact.

Seed Round & Valuation

- Seed Investment Target: $500,000 USD (18,000,000 TL) all-cash round.
- Pre-Money Valuation: $2,500,000 - $3,000,000 USD (90,000,000 TL).
- Sole Founder & Systems Architect: Murat Furkan Bayram (100% Ownership).

Autonomous Mobility Dependency and Safety Flaws

Why Existing Open-Source or Foreign Black-Box Stacks Fail

Extravagant Import & License Costs

- Foreign AV software giants demand multi-million dollar lock-ins.
- Severe data sovereignty risks: Unauthorized cloud transmission of sensor feeds.
- Absence of chassis-agnostic Level-4 stacks built for regional deployment.

Fatal Risks of Stochastic AI

- End-to-end black-box deep learning exhibits sudden phantom braking.
- Complete lack of ISO 26262 ASIL-D and ISO 21448 SOTIF safety guarantees.
- Zero independent failsafe fallback when primary compute units freeze.

GNSS-Denied Localization Blindspots

- Mainstream stacks derail instantly when GPS/GNSS signals are lost.
- Incapable of operating in tunnels, underground mines, or dense urban canyons.
- Industry demands 24/7 deterministic localization under complete GPS jamming.

Dual-Arbitrated Deterministic Safety & L4 Autonomy

Modern C++20, ROS 2, ONNX Runtime, and Multi-Layer Failsafe Architecture

3D Deep Perception (CenterPoint BEV)

- Point cloud pillarization into pseudo-images; optimized ONNX CNN backbone.
- 25.4 ms deterministic inference latency on edge compute.
- 7-DOF Extended Kalman Filter tracking with 3-second trajectory prediction.

GNSS-Denied 3D NDT SLAM & 400Hz ESKF

- 2.6 million pts/sec LiDAR stream delivering centimeter-grade accuracy.
- Flawless lane keeping in sub-surface tunnels under complete GPS jamming.
- 400Hz Error-State Kalman Filter fusing IMU, wheel odometry, and LiDAR scans.

ISO 26262 ASIL-D & ISO 21448 SOTIF

- 50 ms Watchdog timeout triggers autonomous Minimal Risk Maneuver (MRM).
- 1.4 ms CAN-FD bus latency · 200x faster than human driver reaction times.
- Controlled 1.5 m/s² deceleration pull-over ensuring zero passenger discomfort.

Universal Autonomy Core & Commercial Robotaxi SDK

From Electric Passenger Vans to Heavy Industrial AGVs via a Single Engine

Trustia Autonomy Core (C++20/ROS 2)

- 32,400+ lines across 229 verified production files (1,350 automated tests).
- Pure Pursuit & Stanley lateral control with Kinematic Hybrid A* path planning.
- Direct SocketCAN CAN-FD drive-by-wire for steering, throttle, braking, and gears.

SAIC Maxus MIFA 7 Robotaxi SDK

- Comprehensive 21-subsystem evaluation suite tailored for passenger Robotaxis.
- 3.5 Nm driver override sensor yielding instant manual control in under 5 ms.
- 3D WebGL WebConsole enabling zero-install remote fleet teleoperation.

Hardware-Locked Enterprise Delivery

- Source code is strictly protected; clients receive closed-box bytecode packages.
- Hardware-Locked HMAC-SHA256 licensing prevents reverse engineering.
- Compiled C++ shared binaries and hardened Python bytecode distribution.

High-Margin B2B Enterprise & Tier-1 Licensing

NRE Engineering Fees, Per-Vehicle Licenses, and Fleet SaaS Telemetry

1. Per-Vehicle L4 Autonomy License

- One-time core activation fee for OEMs and fleet conversion partners.
- Closed-box hardware-locked deployment.
- Pricing: $5,000 - $15,000 USD / Vehicle.

2. NRE Integration Contracts

- Turnkey chassis adaptation, proprietary CAN-FD gateways, and sensor suites.
- Rapid 60-day closed-track and proving ground commissioning.
- Pricing: $50,000 - $150,000 USD / Project.

3. Fleet Management SaaS Telemetry

- 3D WebGL fleet monitoring, dynamic mission routing, and remote teleoperation.
- Cloud-synchronized SOTIF health telemetry and diagnostic reporting.
- Pricing: $350 - $500 USD / Vehicle / Month.

Official Registers, Defense Approvals, and Ecosystem Ties

Institutional Backing and Zero Legal Risk for Strategic Partners

Defense & Aerospace Registers

- ASELSAN Approved Supplier (#0050569, SAP: FZQHEXGFMTJU).
- Registered Domains: Software Development, System Integration, Land Vehicles.
- STM Defense Technologies Candidate Supplier Pool.

European Union & Global Alliances

- European Commission Participant Identification Code (EU PIC: 861711529).
- EIT Urban Mobility Partner Network (Partner ID: CUS15554).
- Open Invention Network (OIN) Global Patent Defense Licensee.

Incubation & Acceleration Hubs

- Teknopark Istanbul (Cube Incubation) HASAT 2026 Acceleration Program.
- Istanbul Chamber of Commerce BTM (Fulya DeepTech Campus) Resident Venture.
- KOSGEB Advanced Entrepreneur Certificate & BTK Defense AI Accreditation.

06 / CAPITAL ALLOCATION & FINANCIAL ROADMAP

Seed Round: $500,000 USD (18,000,000 TL)

$2.5M - $3.0M Pre-Money Valuation Providing an 18-Month Operational Runway

Capital Allocation

- 45% R&D Payroll (Embedded ASIL-D, Deep Perception, and Validation Engineers).
- 25% Hardware & Sensor Inventory (128-beam LiDAR, CAN-FD gateways, Rugged PCs).
- 15% Independent Safety Certification & Proving Ground Test Operations.
- 15% Business Development, OEM Sales Pipelines, and Patent Protection.

3-Year Revenue Projections

- 2026/2027 (Year 1): 5-Vehicle Pilot Fleet + 2 NRE Deals -> $700K USD.
- 2027/2028 (Year 2): 35-Vehicle Fleet + Mining/Port AGV Licensing -> $2.2M USD.
- 2028/2029 (Year 3): 150-Vehicle Regional Deployment + Defense UGVs -> $6.0M USD.

Break-Even & Strategic Exit

- Break-even achieved at Month 14 through compounding recurring SaaS & licenses.
- Strategic M&A targets: Tier-1 automotive suppliers (Aptiv, Bosch) or global OEMs.

07 / FOUNDER PROFILE & CONTACT

Pioneering Sovereign Level-4 Autonomy

Uncompromising Engineering Rigor and Relentless Execution

Sole Founder & Architect: Murat Furkan Bayram

- 100% Equity Ownership and Sole Proprietor of all Intellectual Property.
- Architected the entire 32,400+ line Level-4 autonomy stack from the ground up.
- Deep technical mastery in C++20, ROS 2, CAN-FD, 3D LiDAR SLAM, and SOTIF.

Advisory & Institutional Ecosystem

- Teknopark Istanbul (Cube Incubation) & ITO BTM Legal and Venture Network.
- Open Invention Network (OIN) Worldwide Patent Defense Framework.
- ASELSAN and Defense Industry Vehicle Integration Standards Advisory.
