

TRUSTIA AI — Executive Pitch Deck

Military-Grade GPS-Denied Autonomous Vehicle Software System

1. EXECUTIVE SUMMARY & CREDENTIALS

TRUSTIA is a certifiable autonomous vehicle software brain engineered specifically for GPS-denied tactical operations. Built in modular Python with 15,401 lines of core code, TRUSTIA provides 3D Pose Graph SLAM, visual odometry, and real-time multi-modal AI sensor fusion.

Credential / Certification	ID / Reference	Status
KOSGEB Advanced Entrepreneurship	KSB01UGE0115153370	100% Approved
SSB & BTK Academy Defense Score	L2zPtN4X1ZJ	100/100 Perfect Score
TUBITAK ARBIS Researcher ID	TBTK-0229-6571	Registered
ASELSAN Portal Application	0050569CCE941FD1A49FCEFB9B7BE7A6	Active / Dossier Ready
Automated Test Suite	1,276 Passed Tests	100% Pass Rate

2. THE PROBLEM & SOLUTION

Problem: Electronic warfare, signal jamming, and spoofing paralyze commercial GPS-dependent UGVs in tactical operations. Conventional UGVs also lack real-time fusion for unexploded ordnance (UXO) and CBRN hazards.

Solution: TRUSTIA eliminates GPS dependency through deterministic 3D Pose Graph SLAM and visual/wheel odometry in pure Python with zero third-party runtime dependencies. Proprietary AI modules identify IEDs/landmines, creating automatic 30m safety quarantine zones.

3. MILITARY STANDARDS COMPLIANCE

Standard / Protocol	Organization	Implementation Module
SAE AS6091 / AS6009 (JAUS)	SAE International	integration/jaus.py
STANAG 4586 Interoperability	NATO	Compliant Protocol Stack
ROS 2 Bridge	Open Robotics	integration/ros2_bridge.py
CAN 2.0 / CAN FD Layer	Bosch / ISO	integration/can.py
MIL-STD-2525 C2 Console	US DoD / NATO	command/tactical_gui.py

4. ABU DHABI & MENA GROWTH STRATEGY

Through Hub71 and the ADGM ecosystem, TRUSTIA will establish its regional headquarters in Abu Dhabi to partner with UAE defense conglomerates (EDGE Group, Nimr, ADASI, Tawazun Council). We will integrate our software brain into UAE-manufactured tactical UGVs and recruit local Abu Dhabi robotics integration engineers.
