OFFICIAL LETTER OF INTENT & APPLICATION COVER LETTER

Dear Members of the Evaluation Committee,

On behalf of **Trustia AI Technologies**, we submit this official Application Cover Letter in support of our registration under the **Malta Startup Residence Programme (MSRP)**, directly integrated with our concurrently submitted **Malta Enterprise Start-up Finance Application (Ref: 100062411 / Case: CRM:0175017)**.

Trustia AI is a deep-technology robotics and software enterprise developing **full-stack deterministic Level-4 autonomous driving systems**. Unlike opaque end-to-end black-box architectures, our proprietary autonomy stack relies on mathematically verifiable Hybrid A* trajectory planning, 3D LiDAR NDT (Normal Distributions Transform) SLAM with GNSS-denied millimeter precision, and automotive-grade ISO 26262 ASIL-D failsafe kernels (featuring a 5ms instantaneous driver-override lock). Our reference vehicle platform is the all-electric **Hyundai Ioniq 5 E-GMP** retrofitted with advanced solid-state 3D LiDAR and radar arrays.

Strategic Objectives and Commitment to the Republic of Malta:

- **Establishment of Mediterranean Autonomous Mobility R&D Headquarters:** Trustia AI intends to establish its European primary operations base in Malta (targeting our flagship Palazzo innovation campus in the Naxxar/Lija tech corridor), making Malta the sovereign focal point for our Mediterranean and European commercial deployments.
- **High-Value Deep-Tech Employment:** We commit to establishing a dedicated local hardware integration and tactical software engineering team in Malta, creating high-skill careers for embedded robotics engineers and data scientists in collaboration with the University of Malta.
- **Pilot Autonomous Fleet Corridors:** Utilizing our €1,500,000 capital expansion program, we intend to deploy electric Level-4 robotaxi pilot fleets in Malta, providing sustainable, zero-emission smart mobility aligned with Malta's National Transport Strategy.

As Founders, we are fully committed to residing in Malta, establishing our permanent personal and operational base, paying local taxes, and actively contributing to Malta's stature as a premier European deep-tech innovation hub.

We remain at your immediate disposal for any technical demonstrations, code architecture audits, or personal interviews.
