

TRUSTIA AI — NATO INNOVATION FUND (NIF) & DIANA PROPOSAL

GPS-DENIED LEVEL-4 TACTICAL UGV AUTONOMY & NATO STANAG 4586 STACK

Focus: Dual-Use Defense Robotics
EU PIC: 861711529 • EIT: CUS15554
Target: NATO DIANA & NIF 1B€ Fund

Mission Statement: Engineered to provide NATO allied forces with tactical unmanned ground vehicles (UGVs) capable of operating in dense electronic warfare (GPS/GNSS-denied) environments with deterministic sub-centimeter LiDAR SLAM and STANAG 4586 compliance.

1. OPERATIONAL ADVANTAGES UNDER ELECTRONIC WARFARE

Capability	Standard Commercial Stack	TRUSTIA Tactical Architecture
GPS/GNSS Jamming	System failure / drift > 10m	✔ 400Hz ESKF + 3D NDT LiDAR SLAM (< 0.15m drift per km)
RF Spoofing	Susceptible to rogue command injection	✔ HMAC-SHA256 Anti-Spoofing & Replay Protection
Threat Perception	Basic bounding box detection	✔ IED, Landmine, Tripwire & CBRN plume detection
Interoperability	Proprietary closed protocol	✔ NATO STANAG 4586 & SAE AS6091 (JAUS) native
LinkLoss Action	Uncontrolled stop or freeze	✔ 5ms ISO 26262 ASIL-D MRM & Return-to-Home (RTH)

2. ALLIED TESTING & COOPERATION ROADMAP

Trustia is prepared to conduct field demonstrations across NATO proving grounds. Current supplier candidate evaluations are active with ASELSAN (Registration: 0050569CCE941FD1A49FCEFB9B7BE7D6) and BAYKAR Tech, with proving ground access confirmed at Bilişim Vadisi Track.
